

Task 3

For this task, I explored coding practice and collaboration platforms to understand how they can support learning and help students improve their skills. For the coding part, I created an account on HackerRank and completed a beginner-level Python challenge called “Say Hello, World! With Python.” This was my first experience using the platform, and it helped me understand how coding challenges are structured and solved. I also took a screenshot of the completed challenge as proof.

For the collaboration part, I used Google Workspace to create a Digital Literacy Awareness Quiz using Google Forms. The quiz consisted of five questions, including both multiple-choice and short-answer types, to test basic knowledge about digital literacy. I also linked the form to a Google Sheet to automatically collect and view responses.

Through this task, I got hands-on experience with both coding and online collaboration tools. It helped me improve my basic Python skills and understand how digital tools can be used for learning and sharing knowledge effectively.
